About Me

Security Specialist focused on application penetration testing, vulnerability management, and defensive engineering. Adept at developing custom automated solutions to optimize daily security workflows, perform compliance audits, and reinforce critical systems against emerging attack vectors.

Contribute to major regulatory projects including PCI DSS, HIPAA, NBC TCRMG and comprehensive Security Awareness programs. As a specialized Application Penetration Tester, I combine deep technical exploitation with defensive end-to-end Vulnerability Assessments and OS Configuration Hardening to systematically eliminate attack vectors and safeguard mission-critical systems.

Skills

- | | |
|----------------------------------|--------------------------------|
| ★ Phishing | ★ Vulnerability Scanning |
| ★ API Pentest | ★ Web App Security |
| ★ OS Hardening | ★ Scripting |
| ★ Report Writing & Documentation | ★ Social Engineering Awareness |
| • PCI DSS HIPPA
NBC TCRMG | • Active Directory Security |
| • Cryptography | • Encryption |
| • Python | • Network Scanning |
| • Burp Suite | • AI chatbot |
| • Kali Linux | • Window |
| • Sqlmap | • Firewalls & IDS/IPS |
| • Network Protocols | • Secure Code Review |
| • Container/Image | |

Work Experiences

February 2023 Tech lead developer | Profinish

- May 2023

- Led and contributed to all phases of a VR work-from-height safety project, from planning and ideation to development, independently building a functional VR environment and core features in Unreal Engine with cost-efficient asset integration
- Conducted comprehensive testing to ensure the prototype's functionality, usability, and adherence to safety standards
- The VR training solution enhanced user engagement and enjoyment compared to traditional onboarding, resulting in a 60% reduction in operational costs. Built-in data collection enabled actionable insights into trainee performance, driving continuous improvement and informed development decisions

May 2023

- July 2023

Developer and Tester | Profinish

- Built with Botpress, StackAI, and Zapier, the chatbot offered a user-centric experience with dynamic ChatGPT responses, knowledge-based answers, video demos, and 24/7 mobile accessibility via social media platforms
- Enabled natural language interaction through a curated knowledge base, ensuring accurate, controlled information delivery and responses within 3 seconds
- Captured and analyzed user data via Zapier to support continuous improvement and performance tracking, enhancing safety, efficiency, and engagement across the workforce
- Delivered an AI-powered chatbot for LinkAlliance that revolutionized frontline worker onboarding and health & safety training, achieving a 65% cost reduction

Specialist, IT Security (Pentest) | Canada bank

Oct 20225

- Present

- **VA:** Support End to End Vulnerability Assessment using Nessus and Custom tools to eliminate repeated tasks
- **Pentest:** Conduct penetration testing on web application and API both Internally and externally
- **Hardening:** Develop custom audit files tailored to internal security baseline
- **Project Management:** Coordinating between vendor and internal stakeholder in major project such as PCI DSS, HIPPA, NBC TCRMG
- **Security Awareness:** Creating tailored learning modules for both internal staff and external party such as schools, hospital, etc.
- **Red Team Exercise:** Perform phishing, vishing simulation with breaking record achievement.
- **Secure Code Review:** Utilizing SonarQube to perform analysis on source code before deployment
- **Container/Image scanning:** Perform security scan using Trivy and generate professional reports.
- **Custom Tools:** Build an end to end system with nessus api to support VA and Hardening assessment from ticket request to sign off. Build an automated penetration testing tools with false positive elemenation.

Education

- The University of Auckland
Bachelor of Computer Science
- Taylor College
Foundational Education

Certificates

COMPTIA Network+ certificate
- completed
COMPTIA Security+ certificate
- completed
EC Council | Ethical Hacker
-Ongoing

Societies and Projects

Creator | Restaurant Ordering App with Telegram API

Designed and developed a full-stack web app with HTML, JavaScript, CSS, and Telegram API integration, enabling order placement, cart management, geolocation via Leaflet, payment proof upload, and order history. Telegram bot notifies the client of customer orders, locations, and payments. Check out my web app at <https://github.com/Verticle/KonSoup40>

Member | FiNoodle

Developed 'FiNoodle,' a Python tool that automates conversion between client-defined question data and Moodle XML, reducing quiz creation time by 70%. It improves quiz quality through robust error checking and pre-publication validation. Check <https://github.com/uoa-compsci399-s2-2022/Finale>

Exchange student | NARIT Astronomy Camp

Forty top high school students from Southeast Asia will participate in an immersive astronomy program, culminating in hands-on learning and celestial observation at Thailand's National Observatory on Doi Inthanon

Member | Common purpose U21 Leading Change

Completed an online leadership development program by Common Purpose, gaining practical skills, frameworks, and cross-boundary leadership capabilities to lead effectively in diverse, interconnected environments

Founder | BotTalk

Developed BotTalk, an AI-powered chatbot for SMEs in Cambodia, automating customer service, order processing, and product recommendations. Enabled 24/7 personalized support, improved efficiency and engagement, and reduced customer support costs by over \$500/month <https://www.facebook.com/profile.php?id=61572726967783>

Participant | Project Management Essential training

Participate in a two days training program, where I have learned the essential skill of project management including how to manage the timeline, coordination between stakeholder, and handling issue during the project timeline.
